airmoVOC BTEX MCERTS

A GC/FID instrument for BTEX monitoring in air, water and soil

Description:

The airmoVOC BTEX MCERTS is a gas chromatograph for analysis and monitoring of trace amounts of benzene, toluene, ethylbenzene, (m/p/o) xylene by FID detection.

Principle:

- Automatic sampling and concentration using an absorbant trap
- Desorption from the trap and injection into a metallic capillary column regulated by a temperature gradient. The H₂ pressure at the column head is controlled by a piezo valve.
- The detection of all compounds eluting from the column is performed by a FID detector

Key points:

The airmoVOC BTEX MCERTS is equipped with an integrated PC including the Vistachrom software. The internal calibration option CALIB allows for automatic validation of results at low ppb.. (Certified Benzene tube at $\pm 10\%$).

The instrument is robust, compact and very low maintenance and offers excellent result quality : repeatability, linearity, stability and sensibility (ppt).

TÜV Certificate for BTEX in 1996
