H₂S/TOS TS MEDOR®

Sulfur compounds analyzer

Description

- The H₂S/TOS TS MEDOR® is an autoGC-ED (MEDOR® Electrochemical wet cell Detector) for the analysis and monitoring of H₂S, TOS and TS by sum of H₂S + TOS in natural gas and gaseous fuels.
- Different configurations exist depending on the application and concentration range:
 - HS₂/TOS TS MEDOR ppb for 0-1 ppm
 - H₂S/TOS TS MEDOR ppm for 0-10 / 0-50 / 0-100 ppm

Principle

- Automatic sampling using a loop
- Automatic loop injection on metallic capillary column
- Isothermal gas chromatograph
- Detection of all compounds eluting from the column performed by MEDOR® detector: Electrochemical wet cell Detector which is a Sulfur Specific Detector (SSD)
- Signal provided by electrochemical reaction between the wet cell electrolyte and the sulfur compounds
- Fully compliant with ASTM D 7493-22: Standard Test Method for On-line Measurement of Sulfur Compounds in Natural Gas and Gaseous Fuels by Gas Chromatograph and Electrochemical Detection.
- Compliant with ASTM D 5504-20: Standard Test Method for Determination of Sulfur Compounds in Natural Gas and Gaseous Fuels by Gas Chromatography and Chemiluminescence with alternative detector.

Key points

- Continuous monitoring with automatic online sampling
- Analytical performances:
 - Specific, linear and very sensitive to sulfur compounds
 - Results validation by automatic standard injection
 - Long term stability using detector installed in reservoir
- Extremely low maintenance
 - Very long life time detector with electrolyte, **up to 10 years**.
 - Low gas consumption, can be reduced in option
 - More than 10 years data storage
 - No cylinders required thanks to internal calibration tube and gas generators
- Automatic control with process device
- Intelligent system with tunable and interactive alarm levels
- Powerful VISTACHROM Chromatotec® software:
