airmoVOC C6-C12

BTEX included

Analysis of up to 53 compounds from
C6 to C12 and halogen compounds (TO14) or (PAMS).

Principle:

The airmoVOC C6-C12 uses a valve with 1 sample trap, and a **metallic capillary column**.

- Miniaturization, sensitivity, mobility and flexibility are its main features.

Everything from the sample port up to the data storage is integrated in a 19"-rack 5U:

- Uninterrupted sampling with pre-concentration on 1 absorbent tube
- Gas chromatograph with 0.2 mm ID metallic column and programmable temperature gradient oven and pressure / flowcontrol of the carrier gas by piezo-valve

Before delivery the analyser is tested for one week by our quality control department. The Vistachrom software enables the user to visualize and store data on a PC. Furthermore it enables the user to recalculate, calibrate the instrument export data and to set-up measurement.

The software allows the calculation of retention time, area, mass or concentration profiles.
