

CHR^OMA FID

Volatile organic compound analyzer

An industrial gas analyzer for volatile organic compounds using flame ionization detection.

A 19" inch rack mountable chassis, 4U high. It has ability to be used as a fully integrated system for automatic sample analysis as well as it is transportable for use on various sites. The CHR^OMA^{FID} is able to meet all of the requirements for VOC analysis. Our application flexibility allows the CHR^OMA^{FID} start up to meet the customer's specifications.

Industrial Hygiene

0,1 to 10 ppm

Process Follow Up

0,1 to 10 ppm

Environment

Emissions

- **Principle :**

The CHR^OMA^{FID} is an **isothermal industrial gas chromatograph** dedicated to the analysis of volatile organic compounds in air (indoor, outdoor), industrial hygiene, pure gas like N₂/CO₂/O₂.

As a fully automatic instrument, the CHR^OMA^{FID} allows **un-attended operation** the **commissioning 24/24**.

The injection is made via a heated valve. The separation is achieved using a macro bore (0,53 mm) or a capillary column (0,2 mm), according to the application. An electrical valve regulates carrier gas (hydrogen). The retention time drift is less than 0,3 %. The instrument has a flame ionization detector (FID) heated to 150°C. The detection limit of the CHR^OMA^{FID} is > 20 ppb.

The CHR^OMA^{FID} is equipped with an internal microprocessor which runs all of the analytical events (temperature, pressure, injection, detection and concentration calculations).

The VistaCHROM software enables the user to visualize and store data on a PC. Furthermore it provides comfortable utilities to recalculate, calibrate and export data and to set-up measurement.

The airmoTREND software allows the calculation of retention time, area, mass or concentration profiles.

Applications examples:

- Paint thinner analysis
- Toxic compounds monitoring: ex BENZENE.
- Monitoring of solvent emissions
- Quality control of manufacturing process and VOC analysis

- **Options :**

- On-line results are transmitted via a MODBUS / JBUS or MGS1 communication protocol.
- Analog output 4-20 mA or 0-10 V.
- Automatic validation
- Oven gradient temperature
- 24 V power supply.
- Pressurised housing like Exp for installation in the area 1.
- Multiple Stream selector (2 to 6)

Chromatotec is specialised in VOC, sulfur and permanent gases analysis at trace and ultra trace levels (ppm, ppb, ppt).
